Case Study: Old Scidmore Farm

Owner: Karen G. Hess
Driller: Leise Well Drilling, Argyle, NY
H.V.A.C. Contractor: Smart-Energy, Harold Rist,
General Manager (IGSHPA certified installer)

In 2003, Smart-Energy had installed a geothermal H.V.A.C. System for Steve and Claudia Elkins of Argyle, NY, friends of Karen.

Steve, Claudia, and Karen had long been producing the lowest environmental impact in both their homes and businesses.

Old Scidmore Farms has a truly organic greenhouse, specializing in Herbs, Asian Vegetables, and Edible Flowers.

Karen chose Leise Well Drilling of Argyle as they had drilled the geothermal/domestic water well for the Elkins. Also, Richard Leise, owner, has had a Smart-Energy geothermal system in his home since 1988.

Next Karen contacted Harold Rist of Smart-Energy to look into both the environmental and economic advantages of converting her greenhouse to geothermal. Some of these benefits are....

- Cost from 30 to 60% less to operate for heating
- Can also supply cooling to prevent sensitive plants from "baking" due to excessively high temperatures
- Have no fuel deliveries or fuel storage environmental issues
- Produce no carbon monoxide, carbon dioxide, or hydrocarbons of any kind to pollute our atmosphere
- In fact over 70% of a geothermal H.V.A.C. system's energy comes from the earth

The savings this geothermal H.V.A.C. system represents over the next 20 years is not drilling, transporting, or burning the equivalent of over 300 barrels of oil. America thanks Karen Hess & Scidmore Farms!

Controls Both Heating & Cooling

Invest in your future ... not their fuel company! (or electric utility)
